Burns throttle linkage kits are now available to ease the installation of single or dual carbs on your Burns manifold. These kits use the Burns aluminum throttle arm, Stromberg rod ends, Stromberg linkage to connect the dual carbs and easily adjustable swivels of our own design. Both feature a throttle return set-up developed in conjunction with Stromberg Carburetor Co. that does away with the need for any additional return springs.

Detail - Throttle Return Set-Up on Single Carb Linkage

Detail - Swivel - After set screw locates swivel body on rod the lock-nut is adjusted to avoid excess slop.

Stainless steel is used throughout, with the exception of some standard hardware items. These kits have undergone many miles of testing and have been refined to this final design. They come preassembled and packaged with instructions and an allen hex wrench to ease swivel adjustment.
